

# Logical model for a small bookstore

Created by Eason Zhao

Type 1 overwrites data  
Type 2 retains changes

| Customer_address (Type1) |
|--------------------------|
| address_id               |
| customer_id              |
| address_line             |
| city                     |
| province                 |
| country                  |
| postal_code              |

| Customer_address (Type2) |
|--------------------------|
| address_id               |
| customer_id              |
| address_line             |
| city                     |
| province                 |
| country                  |
| postal_code              |
| effective_date           |
| end_date                 |
| current                  |
